

Hello Tauqir,

Please find below the structured requirements and training materials for the project.

This is separated into two parts:

PART A: Tugatai AI SaaS Platform requirements

PART B: Tugatai Cargo Logistics tenant training materials

The goal is to build Tugatai AI as a scalable multi-tenant SaaS platform, while Tugatai Cargo Logistics becomes the first tenant/client inside the system.

PART A: TUGATAI AI SAAS PLATFORM REQUIREMENTS

1. Platform Purpose

Tugatai AI is being developed as a SaaS AI assistant platform for companies.

The system should support:

WhatsApp AI assistant

Facebook Messenger AI assistant

Instagram DM AI assistant

AI Voice Agent

Lead management

Booking management

Human handoff

Knowledge base/RAG

Pricing engine

Tenant-based business automation

This platform should not be hardcoded only for Tugatai Cargo Logistics.

2. Multi-Tenant Requirement

Each business/client must have its own tenant account.

Each tenant should have:

Company profile

Branding

Users/staff

Connected channels

Knowledge base

Pricing rules

Business workflows

Customer conversations

Leads/bookings
Escalation settings
AI tone/style
Reports and analytics

Tenant data must be separated from other tenants.

3. Required Core Modules

Please build or plan the platform around these modules:

Admin dashboard
Tenant management
User and role management
WhatsApp integration
Facebook Messenger integration
Instagram DM integration
Twilio voice agent
AI conversation engine
RAG/knowledge base system
Pricing calculation engine
Booking/lead management
Human handoff
Conversation history
Follow-up automation
Analytics/reporting
Security and access control
Settings/configuration panel

4. Prompt and Knowledge Structure

The system prompt should control behavior only.

Examples:

Tone
Safety
Escalation behavior
Booking flow
Conversation rules

Business data should not be permanently hardcoded inside one large prompt.

Business data should be stored in:

Tenant knowledge base
Database
Admin-editable settings

Pricing tables
Batch/schedule tables

5. Dynamic Data Requirement

The following should be editable from the admin panel:

Rates
Batch numbers
Cut-off dates
Departure dates
ETA
Surcharges
Temporary notices
Country availability
Staff contacts
Office details
FAQs
Service updates

6. Pricing Engine Requirement

AI should not manually guess prices.

The AI should collect customer details, then backend should calculate using the pricing engine.

Pricing engine should support:

Rate per kg
Minimum kg
One-time charges
CBM/volume calculations
Per-piece prices
Air cargo calculations
DHL/document pricing
Country-specific rules
Surcharges
Special item logic

7. Human Handoff Requirement

System must hand over to human staff when:

Customer confirms booking
Pricing is unclear
Service is unsupported
Legal/refund/compensation issue arises

Customer is angry
Cargo is lost/damaged/missing
Restricted item is mentioned
High-risk case appears
Partnership/job inquiry comes in

Handoff should pass:
Customer name if available
Phone/contact
Channel
Conversation summary
Destination
Item list
Pickup location
Pickup time
Urgency level
Reason for handoff

8. Twilio Voice Agent Requirement

For development, ngrok temporary webhook URLs may be used.

However, production must use:
Stable webhook URLs
Secure server
SSL
Proper environment variables
Production domain
Secure Twilio configuration

Please document:
Twilio access required
Webhook flow
Development setup
Production setup
How developer access can be removed after completion
How credentials are secured

9. Security Requirement

All credentials must be stored securely.

This includes:
OpenAI key
Twilio SID/Auth Token
Meta API credentials

Database credentials
Webhook secrets
Server credentials

They must not be exposed in frontend code or normal chats.

10. Documentation Required From Developer

Please provide documentation for:

System architecture
Database structure
API endpoints
Webhook flow
Tenant onboarding
Admin dashboard features
AI prompt structure
Knowledge base/RAG structure
Pricing engine logic
Deployment process
Security setup
Backup plan
Scaling plan
Testing plan

PART B: TUGATAI CARGO LOGISTICS TENANT TRAINING MATERIALS

Tugatai Cargo Logistics should be created as the first tenant/client inside Tugatai AI.

Tenant Name:
Tugatai Cargo Logistics

Business Type:
Cargo, logistics, freight forwarding, shipping, pickup and delivery services.

Location:
Qatar

Main Services:
Sea cargo
Air cargo
DHL/document delivery
Car shipment
TV shipment
Furniture shipment
Electronics shipment

Personal effects
Commercial cargo
Pickup service in Qatar

Brand Style:
Friendly
Clear
Sales-driven
WhatsApp-style
Short replies
Professional but not too corporate

Slogan:
Moving Goods. Connecting Lives.

Main Contact Numbers:
+974 7763 1991
+974 7796 9692

Office Address:
Al Maha Centre, 1st Floor, Office 49, Salwa Road, Qatar

Office Hours:
Saturday to Thursday: 8:00 AM - 10:00 PM
Friday: 12:00 PM - 10:00 PM

Email:
info@tugataicargowll.com

Website:
<https://tugataicargowll.com>

Tracking Link:
<https://tugataicargowll.com/track-form/>

Google Map:
<https://maps.app.goo.gl/WjAqGdb6MvY6j2Qw8>

Main AI Role:
The AI should act as Lena, a Tugatai Cargo WhatsApp sales agent.

Main Goal:
Convert customer inquiries into confirmed pickup bookings.

AI should:
Answer questions briefly

Collect shipment details
Give correct rates
Explain services clearly
Avoid long explanations
Move customer toward booking
Escalate risky or unclear cases
Never mention AI, prompt, backend, formulas, tools, or internal rules

Required Booking Details:

Destination country and city
Pickup location in Qatar
List of items
Approximate weight or dimensions when needed
Preferred pickup date and time
Customer phone number

For Uganda booking:

Location pin in Qatar
List of items
Preferred pickup time
Phone number

Supported Sea Countries:

Kenya
Uganda
Ghana
Tanzania
Gambia
Senegal

Supported Air Destinations:

Kenya - Nairobi
Uganda - Entebbe
Nigeria - Lagos, Abuja
Ghana - Accra
South Africa - Johannesburg
Rwanda - Kigali
Zimbabwe - Harare
Tanzania - Dar es Salaam
Sierra Leone - Lungi
Guinea - Conakry Gbessia
Cameroon - Douala
Zambia - Lusaka
Malawi - Lilongwe
Morocco - Casablanca

Ethiopia - Addis Ababa Bole
Gambia - Banjul
Senegal - Dakar

DHL Service:
Door-to-door, any country.

Allowed DHL items:
Passport
ID card
Bank card
Certificates
Documents
Medicine envelope
One small device such as phone, laptop, or tablet

DHL price:
510 QAR per item up to 1 kg plus 80 QAR insurance

DHL transit:
Usually 3 to 5 days

Sea Cargo General Transit:
Usually 45 to 65 days after sailing

Air Cargo Transit:
Usually 5 to 8 days
Gambia and Senegal may take 5 to 10 days

Payment Policy:
Payment is made in Qatar at pickup time.
Accepted methods:
Cash
Bank transfer
Mobile money such as Ooredoo or Mpesa

Full payment must be cleared before cargo is loaded.
Receipt should be issued at pickup.

Sea Cargo Rates:

Kenya:
15 QAR per kg
Minimum 20 kg
75 QAR Doha customs and handling fee once per shipment
Batch 192 cutoff: May 12, 2026

Departure: May 15, 2026
ETA: July 30, 2026

Uganda:
16 QAR per kg
Minimum 30 kg
URA duty paid by customer on arrival/release in Uganda
Batch 022 cutoff: May 12, 2026
Departure: May 15, 2026
ETA: July 30, 2026

Ghana:
16 QAR per kg
Minimum 30 kg
All-inclusive
Batch 006 cutoff: May 25, 2026
Departure: May 28, 2026
ETA: August 25, 2026

Tanzania:
15 QAR per kg
Minimum 20 kg
75 QAR Doha customs and handling fee once per shipment
Batch 008 cutoff: May 12, 2026
Departure: May 15, 2026
ETA: July 30, 2026

Gambia:
16 QAR per kg
Batch 001 cutoff: May 25, 2026
Departure: May 28, 2026
ETA: August 30, 2026

Senegal:
16 QAR per kg
Batch 001 cutoff: May 25, 2026
Departure: May 28, 2026
ETA: August 30, 2026

Important:
Batch dates, cutoffs, ETA, and rates must be editable from admin panel because they change regularly.

Destination Collection Points:

Kenya:

Mombasa - Kisauni, Mlaleo

Nairobi - Industrial Area, Kitu Road next to Old Akamba Office

Kisumu - Milimani, opposite St. Stephen ACK Church

Nakuru - Omega House, Watande Road

Eldoret - Peugeot Plaza

Kitale - Bidii Stores Central Elgon

Kakamega - Maziwa Road

Kericho - Jogoo Building

Kisii - Ouru Power Building

Ukunda - door-to-door

Malindi - door-to-door

Uganda:

Oceanic Bus Terminal, Nakawa, Kampala

Ghana:

Tema Community 8 near Bethel Methodist Church

Tanzania:

TAMEED Bus Terminal Office, Dar es Salaam

Mash Poa Office, Dar es Salaam

Gambia:

Bahkoute, Gambia

Senegal:

Dakar, Senegal

Uganda URA Rule:

URA verification and clearance is required before cargo release at Nakawa.

Customer may clear personally using URA TIN number.

Used personal goods may be exempt in many cases.

New goods, electronics, and resale items may attract duty.

Group/company clearance may attract estimated duty around 1.2 to 1.25 USD per kg.

Final URA amount is confirmed by URA during clearance.

URA duty is separate from Tugatai shipping charges.

Receiver should be present at Nakawa during verification.

TV Sea Prices:

24 inch: 275 QAR

32 inch: 325 QAR

40 inch: 425 QAR

43 inch: 517 QAR

50 inch: 570 QAR

55 inch: 645 QAR
60 inch: 775 QAR
65 inch: 925 QAR
70 inch: 1250 QAR
75 inch: 1645 QAR
77 inch and above: 1745 QAR

TV Rules:

Free wooden casing for TVs.

TV shipments do not attract the 75 QAR customs fee.

If customer does not have manufacturer TV box, add 150 QAR.

For unclear TV size, use next larger size.

Super Drum Prices:

Empty super drum sale price in Qatar: 100 QAR

Kenya shipping: 1000 QAR

Uganda shipping: 1100 QAR plus URA duty on release

Ghana shipping: 1000 QAR all-inclusive

Tanzania shipping: 1000 QAR

Gambia shipping: 1000 QAR

Senegal shipping: 1000 QAR

Carton Prices:

Big carton: 20 QAR

Extra large carton: 30 QAR

If cartons are delivered on different day from pickup: 50 QAR delivery fee

Empty super drum delivery inside Qatar is free

Other Per-Piece Prices:

Used PC set: 550 QAR

New PC set: 550 QAR, destination duty may apply

Commercial blender: 54 QAR

Air fryer: 54 QAR

Toaster: 100 QAR

Bedside lamp: 100 QAR

Small water dispenser: 200 QAR

Medium water dispenser: 250 QAR

Large water dispenser: 300 QAR

Small microwave: 200 QAR

Medium microwave: 250 QAR

Large microwave: 300 QAR

Small vacuum cleaner: 250 QAR

Medium vacuum cleaner: 300 QAR

Large vacuum cleaner: 350 QAR

Kids bicycle: 200 QAR

Standard bicycle: 350 QAR
Sports bicycle: 400 QAR
Scooter value up to 1200 QAR: 400 QAR
Scooter value 2500 to 3500 QAR: 980 QAR
Skateboard below 1000 QAR value: 375 QAR
Motorbike: 2000 QAR, duty on arrival applies

Air Cargo Pricing:
75 QAR per kg
Minimum chargeable weight: 45 kg
Airport fee: 670 QAR once per shipment

670 QAR includes:
AWB
Airport handling
Labeling
Bayan and Doha customs
Transfer to airport

Air service is door-to-airport.
Customer clears at destination airport.

Restricted Items:
The AI should not accept or quote these items:
Cash
Money
Gold
Jewellery
Alcohol
Beer
Wine
Liquor
Drugs
Weapons
Guns
Bullets
Knives
Explosives
Chemicals
Fuel
Gas
Flammable liquids or powders
Fresh or frozen meat or fish
Chilled food

These must be escalated to human staff.

Customer Handling Rules:

Greeting:

If customer says hi/hello only, reply briefly and ask whether they are sending cargo or tracking.

Rate inquiry:

Give rate briefly.

Mention minimum kg and one-time fee where applicable.

Then ask if customer wants pickup.

Booking inquiry:

Collect missing booking details step by step.

Tracking inquiry:

Share tracking link and ask for tracking number or phone number.

Delay inquiry:

Calmly reassure customer.

Explain that sea cargo arrival is estimated and depends on sailing, transshipment, weather, and customs.

Angry customer:

Send one calm response.

If still angry, escalate to human staff.

Job inquiry:

Escalate to human staff.

Partnership/franchise/supplier inquiry:

Escalate to human staff.

Legal/refund/compensation issue:

Escalate to human staff.

Strait of Hormuz Delay Response:

The AI should explain calmly that some shipments may experience delays due to regional shipping restrictions/transshipment conditions.

Customers should be reassured that cargo is safe and Tugatai is monitoring the shipment.

The AI should not promise exact dates unless confirmed by operations.

If the customer insists or becomes angry, escalate to staff.

Approved Short Customer Style:

Short replies

Simple English

WhatsApp tone
No bullet points to customer
No long corporate explanation
No formulas
No internal notes
No backend wording
No AI mention
Always continue toward booking when possible

Example Customer Replies:

Greeting:

Hi, I am Lena from Tugatai Cargo. Are you sending cargo or tracking cargo?

Ask destination:

Sending to which country and city?

Ask pickup:

Pls send pickup location in Qatar.

Ask pickup time:

When can we pickup?

Ask phone:

Qatar phone number please?

Rate to Kenya:

Kenya sea cargo is 15 QAR per kg, minimum 20 kg. Doha customs and handling is 75 QAR once per shipment. Do you want pickup?

Rate to Uganda:

Uganda sea cargo is 16 QAR per kg, minimum 30 kg. URA duty is paid on arrival during release in Uganda. Pls send pickup location in Qatar.

Tracking:

You can track here: <https://tugataicargowll.com/track-form/> Pls send tracking number or phone number.

Sea timing:

Sea cargo usually takes about 45 to 65 days after sailing. Arrival depends on transshipment, weather and customs.

Air timing:

Air cargo usually takes 5 to 8 days. It is door-to-airport and customer clears at destination airport.

Escalation line:

Our team will contact you about this. Or call us on 7763 1991 or 7796 9692.

Important Development Note:

Tugatai Cargo Logistics information must remain inside Tugatai Cargo tenant only.

It must not affect other tenants when Tugatai AI is sold to other businesses.

Please use this structure to build the knowledge base, RAG files, pricing engine, booking flow, and tenant configuration properly.

Tugatai AI is intended to become a scalable multi-tenant SaaS platform for AI business automation and omnichannel customer engagement.

Tugatai Cargo Logistics will act as the first operational tenant/client and live production case study inside the system.

Please use the following strategic and technical direction during development.

1. PLATFORM POSITIONING

Tugatai AI should be structured as:

“An Omnichannel AI Customer Engagement and Business Automation Platform for SMEs.”

The platform should support:

WhatsApp AI assistant

Facebook Messenger AI assistant

Instagram DM AI assistant

AI voice agent

Lead management

Booking automation

Human handoff

CRM-style interaction history

Knowledge base/RAG

Business workflow automation

The system must be scalable for future clients outside logistics.

2. SEPARATION OF BUSINESS AND PLATFORM

Please maintain clear separation between:

A. Tugatai Cargo Logistics

Operational cargo/logistics company

B. Tugatai AI Software/SaaS platform

Tugatai Cargo Logistics should be implemented as the first tenant/client inside the Tugatai AI platform.

All cargo-related logic, pricing, routes, SOPs, and customer workflows should remain inside the Tugatai Cargo tenant configuration and should not affect future tenants.

3. MULTI-TENANT ARCHITECTURE REQUIREMENT

The system must be designed as true multi-tenant SaaS architecture.

Each tenant/company should have isolated:

- Branding
- Knowledge base
- Channels
- Pricing rules
- Customer conversations
- Business workflows
- Escalation settings
- Users/staff
- Analytics
- Prompts/configuration
- Automation rules

Tenant data isolation is critical.

4. CORE PLATFORM LAYERS

Please structure the platform in layers:

LAYER 1 — CORE PLATFORM

Shared infrastructure:

- Authentication
- User management
- Role permissions
- Channel integrations
- Conversation engine
- CRM
- Dashboard
- Analytics
- Subscription management
- Security

LAYER 2 — TENANT CONFIGURATION

Each company configures:

- Branding
- Phone numbers
- Office details
- Business tone
- Escalation contacts
- Service types
- Supported destinations
- Working hours
- Automation preferences

LAYER 3 — KNOWLEDGE BASE / RAG

Each tenant uploads:

- SOPs
- Pricing
- FAQs
- Policies
- Service workflows
- Country rules
- Training documents

LAYER 4 — INDUSTRY MODULES

Reusable modules for industries such as:

- Logistics
- Travel agencies
- Real estate
- Car dealerships
- Clinics
- Import/export businesses

This structure is important for long-term SaaS scalability.

5. IMPORTANT PROMPT ARCHITECTURE RULE

The system prompt should only control:

- Behavior
- Tone
- Conversation rules
- Escalation logic
- Safety rules
- Booking behavior

Business information should not remain permanently hardcoded inside large prompts.

The following should be externalized into database/admin-managed knowledge:

- Pricing
- Batch schedules
- Country rules
- Office locations
- ETA
- FAQs
- Policies
- Temporary notices
- Surcharges

This is critical to avoid maintenance problems and scaling issues.

6. PRICING ENGINE REQUIREMENT

The pricing system should be backend/database driven.

The AI should:

- Collect required customer inputs
- Send data to pricing engine
- Receive accurate calculation result
- Return customer-facing quote

Please avoid AI manually calculating pricing inside prompts.

Pricing engine should support:

- Per kg rates
- Minimum kg logic
- One-time fees
- Volume/CBM calculation
- Per-piece pricing
- Country-based pricing
- Surcharges
- Special item rules
- Future tenant custom pricing

7. DYNAMIC ADMIN-CONTROLLED DATA

The following must be editable from admin panel/database:

- Rates
- Batch numbers
- Cutoff dates
- Departure dates
- ETA
- Temporary delays

- Surcharges
- Service availability
- Staff contacts
- Country availability
- FAQs
- Office information

This data changes frequently and should not require prompt editing.

8. HUMAN HANDOFF SYSTEM

Please build clear human escalation and handoff logic.

Escalation scenarios include:

- Unsupported service
- Legal/refund/compensation issue
- Missing/damaged cargo
- Restricted items
- Partnership inquiries
- Job inquiries
- Pricing uncertainty
- High-risk customer cases
- Repeated angry customer

Handoff should transfer:

- Conversation summary
- Customer details
- Destination
- Item list
- Pickup details
- Urgency level
- Reason for escalation

9. CUSTOMER EXPERIENCE GOAL

The AI should function like a real WhatsApp sales/support agent.

Goals:

- Fast replies
- Short replies
- Booking conversion
- Lead capture
- Reduced missed inquiries
- Reduced support pressure
- Consistent customer communication

The system should optimize for operational efficiency and revenue generation, not just AI conversation.

10. VOICE AI INFRASTRUCTURE

For Twilio voice AI:

We understand temporary ngrok URLs may be used during development.

However, production deployment should use:

Stable production webhook URLs

SSL-secured infrastructure

Production domains

Secure environment variables

Proper Twilio access management

Please also document:

Development workflow

Webhook routing

Production setup

Credential management

Security practices

Access removal process after deployment

11. SECURITY REQUIREMENTS

All API keys and credentials must remain secure.

Including:

OpenAI keys

Twilio credentials

Meta credentials

Database credentials

Webhook secrets

They should never be exposed in frontend code or unsecured environments.

12. DOCUMENTATION REQUIREMENT

Please maintain proper technical documentation for:

System architecture

Database structure

API flow

Webhook structure

Tenant onboarding

Knowledge base structure
Prompt architecture
Pricing engine
Deployment
Security
Backup strategy
Scaling strategy

This is important because Tugatai AI is intended to scale into a long-term SaaS business.

13. BUSINESS POSITIONING

Tugatai Cargo Logistics should be treated as:

The first operational deployment

The first production tenant

The first live case study

The experience, workflows, and operational learnings from Tugatai Cargo will later help expand Tugatai AI into other industries and subscription-based SaaS clients.

14. LONG-TERM GOAL

The long-term goal is to position Tugatai AI as:

A scalable AI business automation ecosystem for SMEs, especially WhatsApp-first businesses in Africa and the Middle East.

The platform should therefore be built modularly, professionally, securely, and with future scalability in mind from the beginning.
