

# **Tugatai**

## **1. AI Customer Communication Engine**

The platform includes an AI communication system that automatically handles customer conversations across multiple channels including WhatsApp, Facebook Messenger, Instagram and website live chat. The AI can understand customer intent, answer queries, collect shipment details, and continue natural conversations in multiple languages.

### **Core Capabilities**

- GPT-powered conversational AI
- Multi-channel messaging integration
- Human-like conversation flow
- Multi-language support
- Voice + text + image understanding
- Context-aware memory system
- 24/7 automated customer handling
- Conversation history tracking

The AI behaves like a support agent that can continuously communicate with customers without human intervention.

---

## **2. Structured Data Extraction System**

During conversations, the AI automatically extracts important tugatai information from customer messages and converts them into structured business data.

### **Extracted Information**

- Pickup location
- Delivery destination
- Item type
- Weight
- Dimensions
- Phone number
- Preferred delivery time
- Customer name

This extracted data is automatically stored in the CRM and booking system.

---

### **3. AI Booking Automation System**

The platform includes a complete automated booking workflow where the AI creates bookings directly from customer conversations.

#### **Workflow**

1. Customer sends inquiry
2. AI collects shipment details
3. Pricing engine calculates quote
4. AI confirms booking
5. System generates booking reference
6. Calendar schedules pickup
7. CRM updates lead status

#### **Features**

- Pickup scheduling
  - Appointment booking
  - Automated confirmations
  - Booking reference generation
  - Calendar synchronization
  - Auto follow-up reminders
- 

### **4. Rule-Based Pricing Engine**

The system contains an admin-controlled pricing engine where pricing logic is fully configurable by the business owner.

#### **Pricing Factors**

- Per KG pricing
- Product type
- Cargo dimensions
- Destination
- Shipping method
- Delivery urgency

The AI reads pricing rules from the database but does not independently invent pricing.

#### **Admin Controls**

- Add/edit pricing rules
  - Define service rates
  - Create pricing categories
  - Dynamic quote generation
-

## **5. CRM & Lead Management System**

Every conversation automatically becomes a lead inside the CRM system. The platform tracks customer interactions, booking progress, and sales pipelines.

### **CRM Features**

- Lead tracking
- Customer database
- Conversation history
- Booking records
- Pipeline stages
- Customer activity logs
- AI-generated summaries

### **Pipeline Automation**

- New Lead
- Interested
- Quote Sent
- Booking Confirmed
- Completed Shipment

---

## **6. Human Handoff System**

The platform allows human agents to take over conversations whenever necessary.

### **Features**

- AI-to-human switching
- Manual intervention
- Live agent chat takeover
- Resume AI after resolution
- Conversation tagging
- Internal notes system

This prevents loss of customers during complex cases.

---

## **7. Multi-Tenant SaaS Architecture**

The system is designed as a SaaS platform where multiple businesses can use the same platform independently.

### **SaaS Features**

- Multi-business support

- Tenant isolation
  - Separate business dashboards
  - Subscription plans
  - Scalable infrastructure
  - Centralized admin control
  - Assign manager
- 

## **8. AI Training & Prompt Management System**

Each business can train the AI according to their own workflow and business logic.

### **Training Features**

- Custom prompts
- Business knowledge upload
- Service policy training
- FAQ training
- Workflow customization
- AI behavior configuration

Different companies can have different AI personalities and operational flows.

---

## **9. Business owner Dashboard**

A centralized dashboard controls the entire SaaS platform.

### **Admin Controls**

- Manage all clients
- Monitor analytics
- Control pricing systems
- Manage subscriptions
- Platform configuration
- System monitoring
- Performance tracking
- Monitor customer chats
- Track bookings
- Manage leads
- Train AI
- WhatsApp campaign

---

## **11. Analytics & Reporting System**

The platform includes business intelligence and analytics tracking.

### **Analytics**

- Message volume
- Booking conversion rate
- AI response performance
- Customer engagement
- Lead conversion
- Booking statistics
- Response time metrics

## **12. Multi-Channel Integration Layer**

The platform integrates all customer communication channels into one unified system.

### **Supported Channels**

- WhatsApp Business API
- Facebook Messenger
- Instagram DM
- Future Telegram support

All messages are synchronized into one inbox.

---

## **13. Chat Monitoring Interface**

Business owners can monitor live conversations between customers and AI agents.

## Features

- Real-time chat monitoring
- Conversation filtering
- Agent activity tracking
- Live intervention
- Chat replay system
