

AI-Powered Multi-Channel SaaS Agent Platform

Client Name: Robert

Client Region: Qatar

Date: March 29, 2026

Prepared By: Tauqir

Project Overview

This project involves the development of a **multi-tenant SaaS AI agent platform** that integrates with social media channels such as WhatsApp, Facebook Messenger, and Instagram.

The system will enable businesses like logistics to automate customer communication, booking processes, and service operations using AI. This system's architecture will be designed in a scalable way. It can be expanded later for other businesses.

The AI agent will handle customer conversations, extract structured data (location, item, weight, etc.), calculate pricing based on predefined logic, and complete bookings automatically. The system will also allow human handoff when required and maintain full conversation tracking.

The platform will be scalable, allowing the client to sell subscriptions to multiple businesses and manage them from a centralized admin dashboard.

Objectives of the Platform

- Build a SaaS-based AI agent platform for multiple businesses
- Automate customer conversations across WhatsApp, Instagram, and Messenger
- Enable automated booking workflows (pickup scheduling, appointments, orders)
- Implement a database-driven pricing system (admin-controlled)
- Provide CRM, lead tracking, and analytics dashboard
- Support voice, image, and text-based AI communication
- Enable multi-language support
- Allow human takeover within conversations
- Provide scalable infrastructure for up to 300 clients.

Scope of Work

1. AI Conversation Engine

- Multi-channel AI chat integration (WhatsApp, Instagram, Messenger)
- Natural language understanding (text, voice, images)
- Structured data extraction (location, weight, item details)
- Multi-language response capability

2. Booking & Automation System

- Automated booking flow (pickup, appointment, orders)
- Data collection (address, phone, time, item details)
- Booking confirmation with reference ID
- Google Calendar integration

3. Pricing Engine

- Admin-controlled pricing database

- Rule-based pricing (per KG, product type, dimensions)
- Dynamic price calculation (AI reads but does not calculate independently)

4. Multi-Agent & AI Logic

- Task-based AI behavior (support, booking, inquiry handling)
- Context memory for ongoing conversations
- Prompt-based training per client business

5. SaaS Platform Development

- Multi-tenant system (multiple businesses)
- Subscription & plan management
- Client onboarding & AI training panel

6. CRM & Dashboard

- Lead tracking and conversation history
- Analytics (messages, bookings, conversions)

7. Human Handoff System

- Switch from AI to human agent
- Resume AI after resolution
- Conversation tagging and tracking

8. Web Interface

- Admin dashboard (full system control)
- Client dashboard (business-level control)
- Chat monitoring interface

User Roles

Admin

- Manage all clients and subscriptions
- Control pricing engine and system settings
- Monitor analytics and performance

Client (Business Owner)

- Train AI with business data
- Monitor chats and bookings
- Manage leads and customers

Deliverables

- Fully functional SaaS AI agent platform
- Multi-channel integrations (WhatsApp, Instagram, Messenger)
- Booking and pricing automation system
- Admin & client dashboards
- CRM and analytics system
- AI training and prompt management system
- Google Calendar integration
- Deployment on cloud server
- Full testing & QA
- Clean, scalable, documented code

Technology & Setup

- **UI/UX Design:** Figma
- **Frontend:** React / Next.js
- **Backend:** Node.js / Python
- **Database:** PostgreSQL / MongoDB
- **AI Integration:** OpenAI (GPT-4/5), Vision & Speech APIs
- **Messaging APIs:** Meta (WhatsApp, Facebook, Instagram)
- **Hosting:** Cloud (AWS / VPS / Azure)
- **Automation & Processing:** Custom APIs & services

Pricing and Timeline Breakdown Table:

Phase	Task	Time	Price
1	UI/UX Design & System Architecture	15 days	\$1,000 USD
2	Developing a frontend dashboard Also designing a user-friendly landing page with UI/UX design.	30 days	\$2,600 USD
3	Voice Ai agent, AI Agent Development & Automation Logic	30 days	\$1,000 USD
4	Backend Development & API Integration	40 days	\$2,500 USD
5	Testing, Deployment & Optimization	As per policy	\$500 USD
	Total	115 days	\$7,600 USD

Estimated price: **\$7,600 USD** || Estimated Timeline: **115 Days**

****Includes 2 months of free maintenance, plus ongoing support****

You Will Provide Me

1. Business requirements and workflows
2. Pricing rules and service details
3. API keys (OpenAI, Meta, etc.)
4. Branding (logo, colors, UI preferences)
5. Sample conversations and use cases
6. Access to WhatsApp Business API (if available)

Intellectual Property, Confidentiality & NDA

We fully recognize the importance of protecting your intellectual property and maintaining confidentiality throughout the engagement. Upon full payment and project completion, **100% ownership of the source code, documentation, and system assets** will be transferred to the client.

All information shared will remain strictly confidential. We are fully open to signing a **Non-Disclosure Agreement (NDA)** to ensure your business logic, content strategy, and platform concept remain protected.

Conclusion

This quotation covers the development of a **scalable, AI-powered SaaS platform** capable of automating customer communication, bookings, and business workflows across multiple industries.

The system is designed for long-term scalability, automation, and revenue generation through subscription-based services.

We are ready to begin immediately upon confirmation.

Warm regards,
Tauqir
